Assignment Question-5

Name-Ankush Kumar

Roll no- 55

Registration No-12204834

Section- D2212

Group-2

Submitted TO: Mr.Kumar Vishal

UID:14000

Q-Create an outer class named 'university' and inner class named 'school' inside the outer class. Take the data members 'uname' inside outer class and 'sname', 'program' inside inner class. Create an appropriate method which display name of university (LPU), name of school (SCA) and program name (BCA).

code

```java
public class University {
    private String  uname= "LPU";
    class School {
        private String sname="SCA";
        private String program="BCA";
        public void displayProgram(){
            System.out.println("University name:"+uname);
            System.out.println("School name:"+sname);
            System.out.println("Program name:"+program);
        }
```

```java
        }
    public static void main(String[] args){
        University.School school=new
University().new School();
        school.displayProgram();
    }
}
```
